

**Column Marked Weight of Animal:** To use the Dosage Chart for Animals, (pages 300-301), first go to the column marked Weight of Animal. Run your finger down the column to find the weight of the animal, then go across to the column of the protocol you want. Below is a complete explanation of columns 1 through 6 and what the numbers in each column represents.

**Column 1: Starting Procedure** dosage for animals. As with humans, always start with the Starting Procedure for animals. The three numbers in this column represent the gradual increase in dosage. The first number is the starting dose, the second number is the middle dose, and the third number is the maximum dose that you would ever give an animal for that particular weight listed in the column for the Starting Procedure.

**Column 2: Protocol 1000 and 1000 Plus** dosage for animals. When doing Protocol 1000 for people, you work up gradually to the 3-drop dose; for animals the equivalent to a 3-drop dose is the third figure of the three figures in this column (Column 2). The first number is the starting dose, the second number is the middle dose, and the third number is the maximum dose that you would ever give an animal for that particular weight listed in the column for Protocol 1000.

- ▶ Always start with the Starting Procedure then move on to Protocol 1000, increasing the dosage slowly to the maximum dose for Protocol 1000, but no higher than the dose listed in Column 2 (Protocol 1000) on the chart for the weight of your animal.
- ▶ If at any time you notice your animal getting sicker you have increased his dose too quickly. Reduce the dose immediately by 50%. When the sickness passes, gradually build back up to the desired dosage.
